## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 16-23 and 25 are rejected under 35 U.S.C. 102(b) as being anticipated by Adachi et al.

The patent by Adachi et al. (6,138,351) shows a valve seat with an inner layer (45) and an outer layer (43). The inner layer includes a copper alloy and has good joining properties with respect to the base material of the cylinder head. The outer layer includes an alloy comprising nickel, iron, cobalt, carbon, chromium, molybdenum, cobalt, and tungsten.

The inner layer has good heat conduction properties. The copper alloy of the inner layer includes aluminum and iron as an alloying constituent.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 24 is rejected under 35 U.S.C. 103(a) as being unpatentable over Adachi et al.

The patent by Adachi et al. discloses using an electron beam to fuse the additional material to the cylinder head, not a laser beam. It is the view of the examiner that the method used to fuse the additional material to the cylinder head is an obvious choice of design because no new or unexpected results are achieved.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason Benton whose telephone number is (571) 272-4838. The examiner can normally be reached on M-F 9:30-6:00.
